

Distributed Data Applications with ASP.NET

* The only Enterprise level book that concentrates on distributed techniques. * Fully updated for ASP .NET 1.1 and Visual Studio 2003. * Authors were both anointed as software legends by Microsoft (www.softwarelegends.com). * Demonstrates the range of possibilities and ease of development for distributed data-driven applications with .NET. * Shows how easy it is to take advantage of several different types of client devices, and how to provide the best user experience possible for each one. * Explores all aspects of building ASP.NET 1.1 applications that handle data and work across the Internet or other HTTP networks such as local intranets.
